APPSOLUTELY

THE COMPANY USHERING IN THE NEW LOYALTY ECONOMY

Appsolutely, formed in 2013 in the Philippines, has launched digital platforms and mobile apps that have enabled companies of all sizes, including some with top global brands, to rapidly expand market share and accelerate growth by providing richer, more satisfying customer experiences through loyalty and rewards programs.

Building on our expertise in loyalty and rewards programs, we are launching a new, unified customer loyalty ecosystem that uses blockchain technology as the backbone and the **LoyalCoin** digital asset as the medium of exchange. With these innovations, we are eliminating the customer loyalty programs' limitations we currently encounter, such as public confusion about the different mechanics of each loyalty program, difficulties in points exchange, lack of user engagement, and more. Removing these problems will accelerate the formation of a more cohesive, cooperative, and competitive customer loyalty industry.

The launch of LoyalCoin will involve commitments from entities who will have the digital asset and use it for consumption, operational, and/or other purposes. Participants in this new ecosystem will drive the new loyalty economy with their activities and financial support for the scaling of our platform. For instance, in the consumption-driven emerging economies in Asia, the spread of a unified, proactive customer loyalty system can usher in more customer retention for companies, who will then boost their top and bottom lines. Mass adoption and economic activity from this dynamic loyalty environment will be the engine that can add value to each LoyalCoin.

Simply put, by replacing the limited reward points in the current customer loyalty setup with a blockchain-backed dynamic currency that supports increased participation between customer and brand, we can unlock the full potential of rewards programs and increased value for participants in this revamped loyalty ecosystem.

In the succeeding parts of this whitepaper, we will illustrate the roles that our company, the technology, and the digital asset will play in this new ecosystem, as well

as the value proposition of LoyalCoin as an important part of building the new loyalty economy we envision.

TRACK RECORD

Our proprietary technology for white label digital loyalty apps allowed us to launch the country's first mobile-based customer loyalty system in 2014, a crucial development given that the nation is one of the world's most savvy and active when it comes to mobile services, particularly apps and social media.¹

This technology has opened opportunities for business collaborations with companies in multiple industries, as well as international recognition. We became the trusted loyalty system provider for our home country's biggest brands. Our work in the digital loyalty space has won us the Best Technology Investment Award² in 2015 at the Technology Investment Conference organized by Software Park Thailand.

THE OMNICHANNEL FUTURE

Companies worldwide have set out to aim for an **omnichannel** rewards strategy that shows consistency in service, branding and customer experience, regardless of where brands and consumers meet. An omnichannel reward program is a lofty goal, one that involves a huge amount of collaboration among brands and the channels by which they connect. Difficulty increases as more channels are added and companies enter into agreements to arrange rewards and promotions.

Given our extensive experience in addressing brands' needs for reaching out to customers, we are uniquely positioned to understand, develop and implement a wide-reaching platform that allows for a **universal loyalty points system**, which is a fundamental concept for the LoyalCoin tokens we will be issuing.

SOLUTIONS PORTFOLIO

Appssolutely provides an Internet-based bridge that connects brands and merchants to their customers and audiences. Our offerings have a unifying theme — better customer service.

The main service we provide, and the focus of our push into blockchain, is **digital loyalty**. Through our customizable digital rewards programs, companies were able to offer incentives such as coupons, freebies, promos, as well as points and token-based digital assets that encourage customer loyalty and continued business.

From there, we expanded the use of digital loyalty to innovations that allow for the interaction with digital loyalty programs offline, the synchronization of online and offline activities related to rewards and the creation of employee rewards programs. In addition, in our drive to cater to clients' desire for **omnichannel** solutions, we launched the following services:

Digital Marketing. We offer tailor-made, Internet-based, optimized ad campaign strategies, CRM data, and consumer behavior reports. This service ensures the consistency of a brand's messaging.

E-commerce. One goal of our loyalty programs is to increase Internet-based consumption. Over the past years, we have integrated online ordering systems, electronic gift cards, and digital wallet offerings into website and app-driven loyalty programs, creating a one-stop platform for connecting brands to customers.

Web and App Development. Given that the loyalty programs we create are based on mobile apps and websites, we parlayed our capabilities into serving clients' other platform creation needs, taking advantage of the insights we have about the best practices for creating mobile apps and websites.

We evolved from digital loyalty specialist to omnichannel solutions provider. Unfortunately, rewards points in general have yet to make that evolutionary leap. Rewards points, the medium of exchange of any loyalty program, has been limited due to the complications that come with arranging eligible deals for those rewards. Hence, the logical next step in our growth is to take those points into the future and unleash their full potential. And we'll do it through our blockchain-powered platform for an **omnichannel loyalty economy**.

MARKET OPPORTUNITY

Appsolutely is in a unique position to spearhead the omnichannel loyalty economy. Our loyalty system is the only one in Southeast Asia that is fully integrated with major point-of-sale providers. This market position will be difficult to replicate, as this level of integration went through a long and complicated process.

In addition, our company's mobile loyalty apps allow clients to acquire consumer information and launch marketing campaigns while saving millions in market survey, card production, printing, publication, and direct advertising costs, making us an ideal choice for loyalty programs. Using these advantages, we plan to expand aggressively as more clients in food, pharmacy, remittance, petroleum, fashion, and specialty retail businesses benefit from the competitive advantages of having our solutions.

We also note that there's a lot of room for growth in digital loyalty and e-commerce, our two areas of expertise, aside from the possibilities opened by blockchain. Based on a survey conducted by auditing firm KPMG³, although 42% of companies in the Philippines report that their customers prefer to shop online, about 73% of them have not been able to innovate their business model accordingly. They indicated that they would increase their investments in better data analytics and technologies. With similar conditions in developing and even developing countries, we are here to fill that void.

³ KPMG R.G. Manabat & Co. The Philippine Consumer Market Report, 2017 Investment Guide by KPMG in the Philippines.

CLIENTS

Appsolutely's current clientele includes some of the largest corporations in the Philippines, as well as franchises of international brands. Through these brands, we serve about 2 million customers who are part of loyalty programs we developed. These corporations are market leaders in diverse, customer-facing industries such as fuels (Petron), clothing (Bench), and convenience stores (FamilyMart). In addition, we have launched customer loyalty programs for international brands' branches in the country, most of which are in the restaurant and fashion businesses.

LOYALPLATFORM

THE FUTURE OF THE LOYALTY ECONOMY

CURRENT LOYALTY ENVIRONMENT

More companies and customers around the world are embracing the advantages of customer loyalty programs. In the US, for instance, loyalty program enrollment increased from 2.65 billion in 2012 to 3.32 billion in 2015⁴, according to Big 4 accounting firm Deloitte. The average American belongs to more than ten loyalty programs. Meanwhile, retail loyalty programs are a hit in Asia, where seven in ten customers with Internet access are part of one or more loyalty programs, global survey company Nielsen noted⁵.

Despite the growth in loyalty program participation, numerous pain points have prevented these programs from realizing their full potential. Deloitte noted that as of 2016, only half of loyalty program participants are active, and one-fifth of those active participants never redeemed their rewards. Noted problems include low redemption rates, high operational costs, account inactivity and other logistical concerns as hindrances to improving customer loyalty.

Loyalty programs need to address these inconveniences and cater to consumer preference. Nielsen noted that the most valued rewards in loyalty programs are monetary in nature, so these programs have to emphasize their more redemptive features moving forward. Global loyalty program participants also value flexibility in earning rewards, regardless of channel and choice of rewards to retrieve.

In summary, the current loyalty economy has coordination problems with unrealized rewards, and customers are desiring more flexibility and monetary benefits. In **The Loyalty Economy** of the future, customers need to get what they want, and pain points must be removed.

⁵ Nielsen. Card-Carrying Consumer Perspectives on Retail Loyalty Program Participation and Perks. November 2016. <http://www.nielsen.com/content/dam/niensglobal/eu/docs/pdf/nielsen-global-retail-loyalty-sentiment-report-italy.pdf>

OUR SOLUTION: LOYALPLATFORM

LoyalPlatform is the overall ecosystem that Appsolutely will build to spearhead the next generation of customer loyalty, or **The Loyalty Economy**. This ecosystem, which will include a new **virtual currency**, a **digital wallet**, a series of **white label apps**, and a **coalition** of supporting merchants, is set to change the current uninspired and value-deficient rewards points system to a value-focused, digital-based rewards system that will stand head and shoulders above traditional rewards programs.

Through the LoyalPlatform, customers are more engaged with companies' loyalty programs, while acquiring better rewards for their consumption. Meanwhile, in this new world order of more valuable, tradable rewards tokens, companies that run customer loyalty programs can extract more value from the rewards they give out. A new frontier of competition is created, with companies raising the bar in customer service and loyalty programs.

LOYALCOIN

The central piece of the omnichannel customer loyalty platform that we're building is the LoyalCoin, the medium of exchange that now replaces the traditional rewards point. The LoyalCoin token will serve as a utility token that will be the medium of exchange in the rewards ecosystem, where customers earn LoyalCoin when spending at participating merchants. LoyalCoin is returned to merchants when customers redeem available rewards.

When customers earn LoyalCoin, they are empowered to use it in more ways than traditional customer loyalty programs offer. In both conventional and blockchain-based rewards systems, customers can acquire rewards and incentives using their points. However, in this new ecosystem, the points from one merchant can be used to acquire rewards from any merchant within the ecosystem, even if it's a separate merchant. In addition to redeeming rewards, LoyalCoin can be exchanged for rewards from other merchants, as well as future functions that blockchain technology will allow.

LOYALWALLET AND WHITE LABEL APPS

Much of the economic activity that the LoyalCoin generates takes place in the LoyalWallet app, which facilitates the purchase of goods and services, redemption activities, import and export of tokens, and currency conversion. We will also offer merchants the option to get customized white label apps that enable them to hook into the LoyalPlatform with their own look and feel and transact with LoyalCoin in the usual earning and burning fashion.

As tokens live on both the blockchain and internally within the the LoyalPlatform, our apps will maintain features that incorporate the best of both worlds. At any given time, the LoyalWallet and the white label apps will enable functions such as the issuance of loyalty points as LoyalCoin, the redemption of rewards through LoyalCoin, and the transmission of tokens to friends and family.

LOYALCOALITION

We are also building a coalition of companies and merchants that support the omnichannel ideal of customer loyalty. These forward-looking enterprises will support the issuance of LoyalCoin, replacing their conventional points systems. These companies will also enable the use of LoyalCoin earned from a coalition participant on other merchants in the coalition.

This arrangement allows for a wider scope of usage for LoyalCoin, a more rewarding customer experience, and an incentive for customers to stay loyal with the brands that are part of The Loyalty Economy, the components of which are shown on Diagram 1.

Diagram 1

In a nutshell, these are the features of our LoyalPlatform, to be further discussed below and in the future.

TECHNOLOGY OVERVIEW

BLOCKCHAIN-BASED. SCALABLE AND SECURE.

The following discussion outlines the technology that enables the overall LoyalPlatform and our vision of The Loyalty Economy.

LOYALCOIN TOKEN TECHNOLOGY

LoyalCoin exists as digital assets, or *mosaics*, on the NEM blockchain. Coin holders will be able to check their LoyalCoin balance and transfer LoyalCoin to other addresses, including exchanges. All LoyalCoin is pre-mined with a fixed market capitalization of 9 billion coins. This number represents the sum of all coins circulating within the ecosystem.

This utility token will be divisible to 6 decimal places. Internal LoyalCoin facilitates payment for activities such as reward payouts, redemptions, and more.

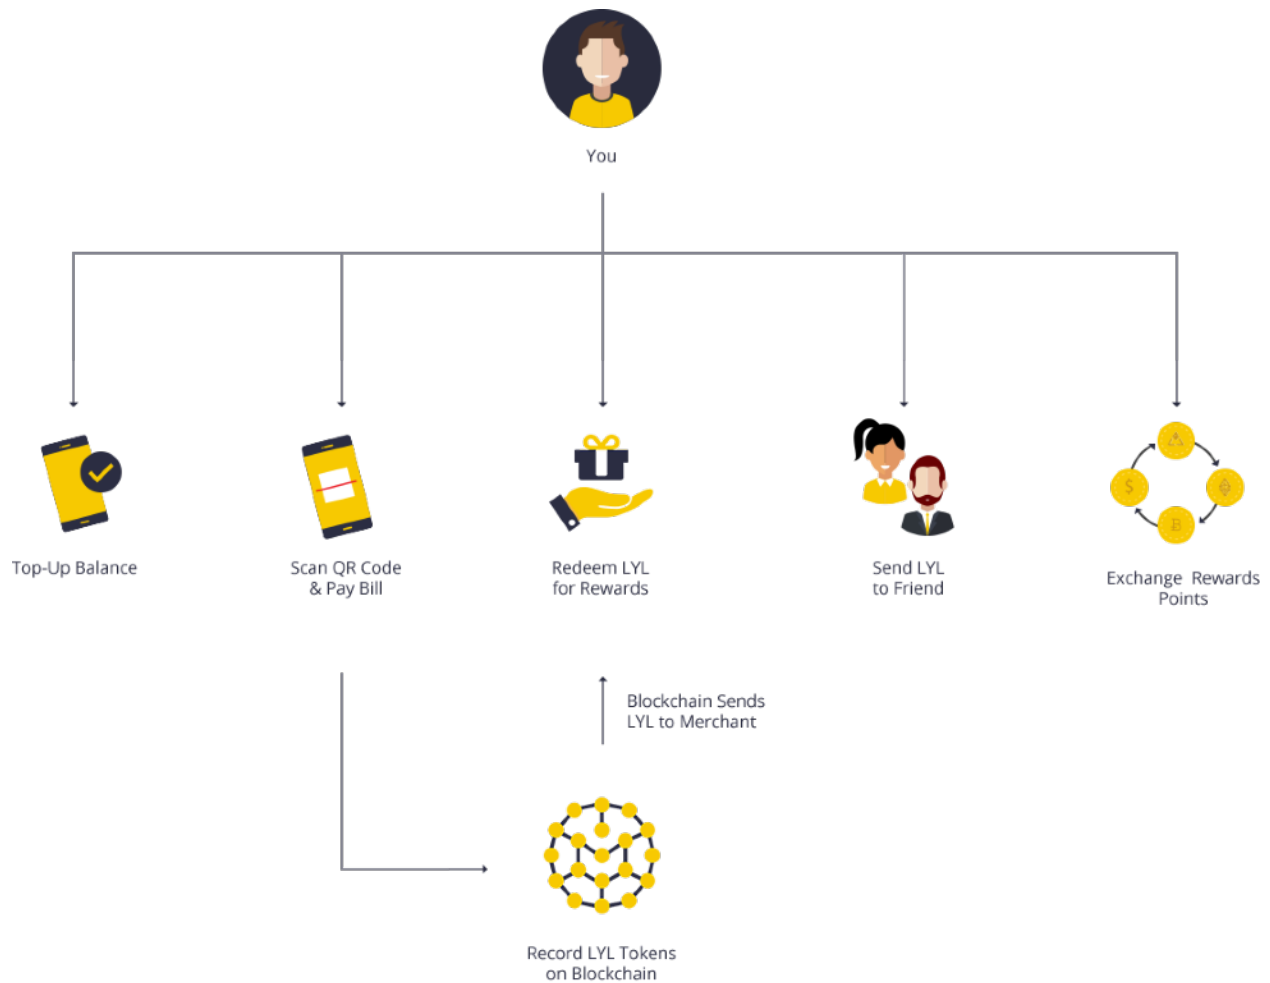

MERCHANT DEVELOPMENT AND ADMINISTRATION SUPPORT

Appsolutely currently administers customer rewards programs for several retailers and more than 2,000 merchant locations in the Philippines. These retailers integrate our traditional points-based rewards program through their point-of-sale systems. They use white label apps that we have developed and continue to provide development and hosting services for. We expect all of these merchants to upgrade from their traditional points system to LoyalCoin. We intend to perform this upgrade and to provide ongoing support and administration for these brands.

Appsolutely will provide full-service support to merchants and their retail locations by offering ongoing software development, hosting, training, and consulting on how to effectively use our technology within their retail locations. It is not required to be a customer of Appsolutely in order to offer the LoyalCoin as a reward. Appsolutely will create a RESTful API to allow merchants that are not our customers to also participate in the LoyalCoalition.

Here's an illustration that shows how the participants in the LoyalCoin usage process are connected with each other.

Diagram 2

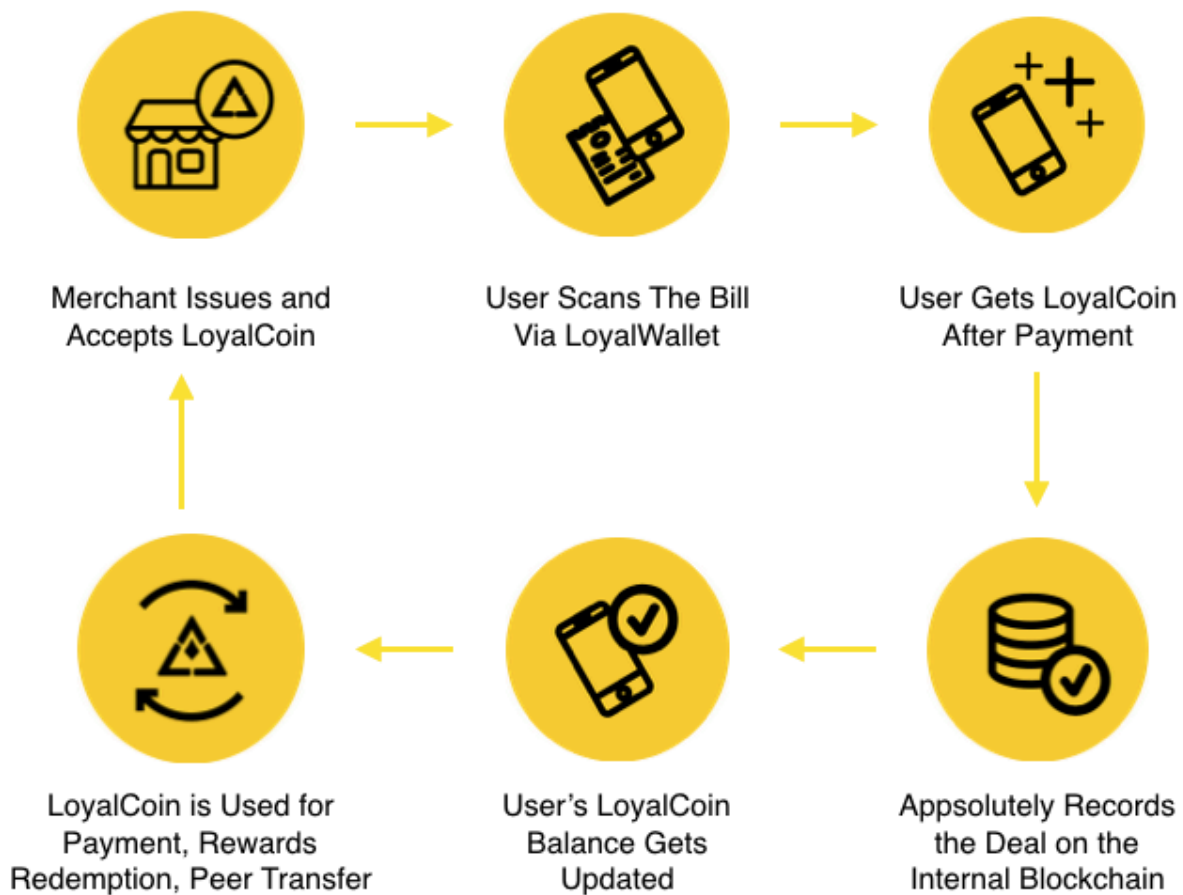

RESTfulAPI

It is not necessary to be a customer of Appolutely to offer LoyalCoin as a reward. Merchants that are not customers will have access to a public API that will enable them to participate in the LoyalCoalition and receive payments using the LoyalWallet. These companies can maintain their own apps and integrate with our system through the API to receive payments and provide redemption. Their customers can use the LoyalWallet to make payments for their goods or services, they can also build their own custom solutions to transact cash or LoyalCoin.

PAYMENTS WALKTHROUGH

There will be a one-scan process for payments at participating retailers. A QR code will be printed on paper or displayed on a tablet device. Customers need only to open their LoyalWallet app and scan the QR code to pay the bill. They may pay in LoyalCoin or other currencies, both fiat and virtual, depending on a user's preference and other prevailing factors.

Diagram 3

Rewards redemption occurs when a merchant takes payment in LoyalCoin. All participating merchants will be required to accept LoyalCoin payment for some or all of their products or services. All of the payments and rewards earned or spent are recorded in our database.

Administering our own payments enables us to track LoyalCoin movement between customers and merchants and to display a user's LoyalCoin balance within the white

label or LoyalWallet app. LoyalCoin within either of these apps can also be sent to a user's XEM-compatible digital wallet. Appsolutely will add this functionality into participating white label apps and the LoyalWallet.

ON-CHAIN AND OFF-CHAIN DESIGN

The NEM network is characterized by fast transaction times and low fees. Nevertheless we propose a hybrid internal/external storage model to mitigate the transaction costs incurred by the large number of small transactions involved in a retail rewards system.

Transactions internal to the LoyalCoin system such as token rewards and redemption, balance checks and so on can be transacted in real time on a private, permissioned database. Customer accounts are reconciled offline with the NEM public network to enable withdrawals and transfers with the outside world. The technical details of this system are the subject of a separate technical white paper.

Balances that remain in the LoyalCoin system become available to power the vibrant LoyalCoin marketplace of e-payments, points conversion, and rewards redemption. All transactions on the LoyalPlatform, including those that involve the credit and debit of LoyalCoin balances, take place instantly as the LoyalCoin coalition apps runs on our private network.

The instant settlement of earnings and total LoyalCoin balance provide a satisfying user-experience and encouragement for users to continue with loyalty shopping and rewards redemption, whilst seeing their LoyalCoin balance updated in real-time. Depending on their situation, some users will prefer to maintain their LoyalCoin internally and others on the NEM blockchain.

LOYALCOIN (LYL)

LOYALTY YOU'LL LOVE

The LoyalCoin (LYL) token is the utility token that will be used on the omnichannel loyalty platform we are building. LYL will serve as both denomination for the rewards ecosystem and avenue for exchange into other virtual and fiat currencies.

When customers earn LYL from their rewards programs, they are empowered to use the tokens on more options than the traditional customer loyalty program can offer. As with the usual program, customers can retrieve rewards and incentives using their points. But in this ecosystem we're building, the points from one merchant can be used to redeem rewards from any merchant a customer prefers.

HOW LYL ADDS VALUE

LYL is attached to a customer rewards ecosystem that makes a case for significant usage by the general public. Even at the current state, where Appsolutely has many merchant partners and serves more than 2 million users through the loyalty programs we operate, there is a good chance of mass adoption for the token. We're also putting economic value into loyalty points that otherwise would have gone stagnant and expired. The value unlocked by these previously unused points will be a source of surplus economic activity, which results in more transactions.

In addition, the LoyalPlatform will drive revenues for Appsolutely in two ways. We earn revenues from per-transaction fees involving the use of LYL as payment and its exchange into other rewards points. Appsolutely will also earn from subscription fees connected with the LoyalCoalition, the white label apps we create, and the use of APIs connected to the platform.

The revenues that we earn from the LoyalPlatform will be further used on the scalability and widespread adoption of LYL, as well as arrangements that sustain the platform and its attractiveness to both companies and consumers.

LOYALCOIN PARTNERSHIPS AND BUSINESS MODELS

HOW THE LOYALCOALITION IS BUILT

Since its launch, LoyalCoin has signed up partnerships⁶ with multiple brands and companies in the Philippines and overseas. In this section, we break down the different business models that LoyalCoin has opened up for these partnerships.

⁶ Unless otherwise indicated, partnerships with the brands displayed here involve their respective Philippine operations.

EARN AND REDEEM

As a platform for universal loyalty, LoyalCoin enables all brands and merchants to get onboarded on our plug-and-play system. A brand can sign up for the LoyalCoalition, enter into a deal with LoyalCoin for a certain supply of LoyalCoins, and modify its rewards earning and redemption mechanics in real time through a merchant-facing app. With this system, brands can participate in the loyalty economy. Here are some of the brands that are part of this business model.

Gong cha 貢茶

CAFFÉ PASCUCCI

PIZZASTUDIO

REWARDS, POINTS, VOUCHERS, AND MILES (RPVM)

For other brands who may decide not to be part of LoyalCoin's loyalty programs but want to expand their customer base to LoyalWallet users, LoyalCoin also offers the option to carry a brand's rewards, points, vouchers, or miles. Under this arrangement, the LoyalWallet will feature vouchers for those brands' rewards, which will be exchangeable for LoyalCoin. This business model primarily caters to market-leading brands that already have established loyalty systems but would still want to explore LoyalCoin's solutions. It also opens the door for LoyalCoin to establish further ties with these brands.

SERVICES

LoyalCoin also opens up partnership possibilities with numerous service providers, which may want to add functionalities to the LoyalWallet in exchange for participation in the loyalty economy we are building. For instance, our partnership with TrueMoney will give LoyalWallet users the opportunity to buy LoyalCoin or convert their LoyalCoins to cash via TrueMoney's money transfer outlets in the Philippines.

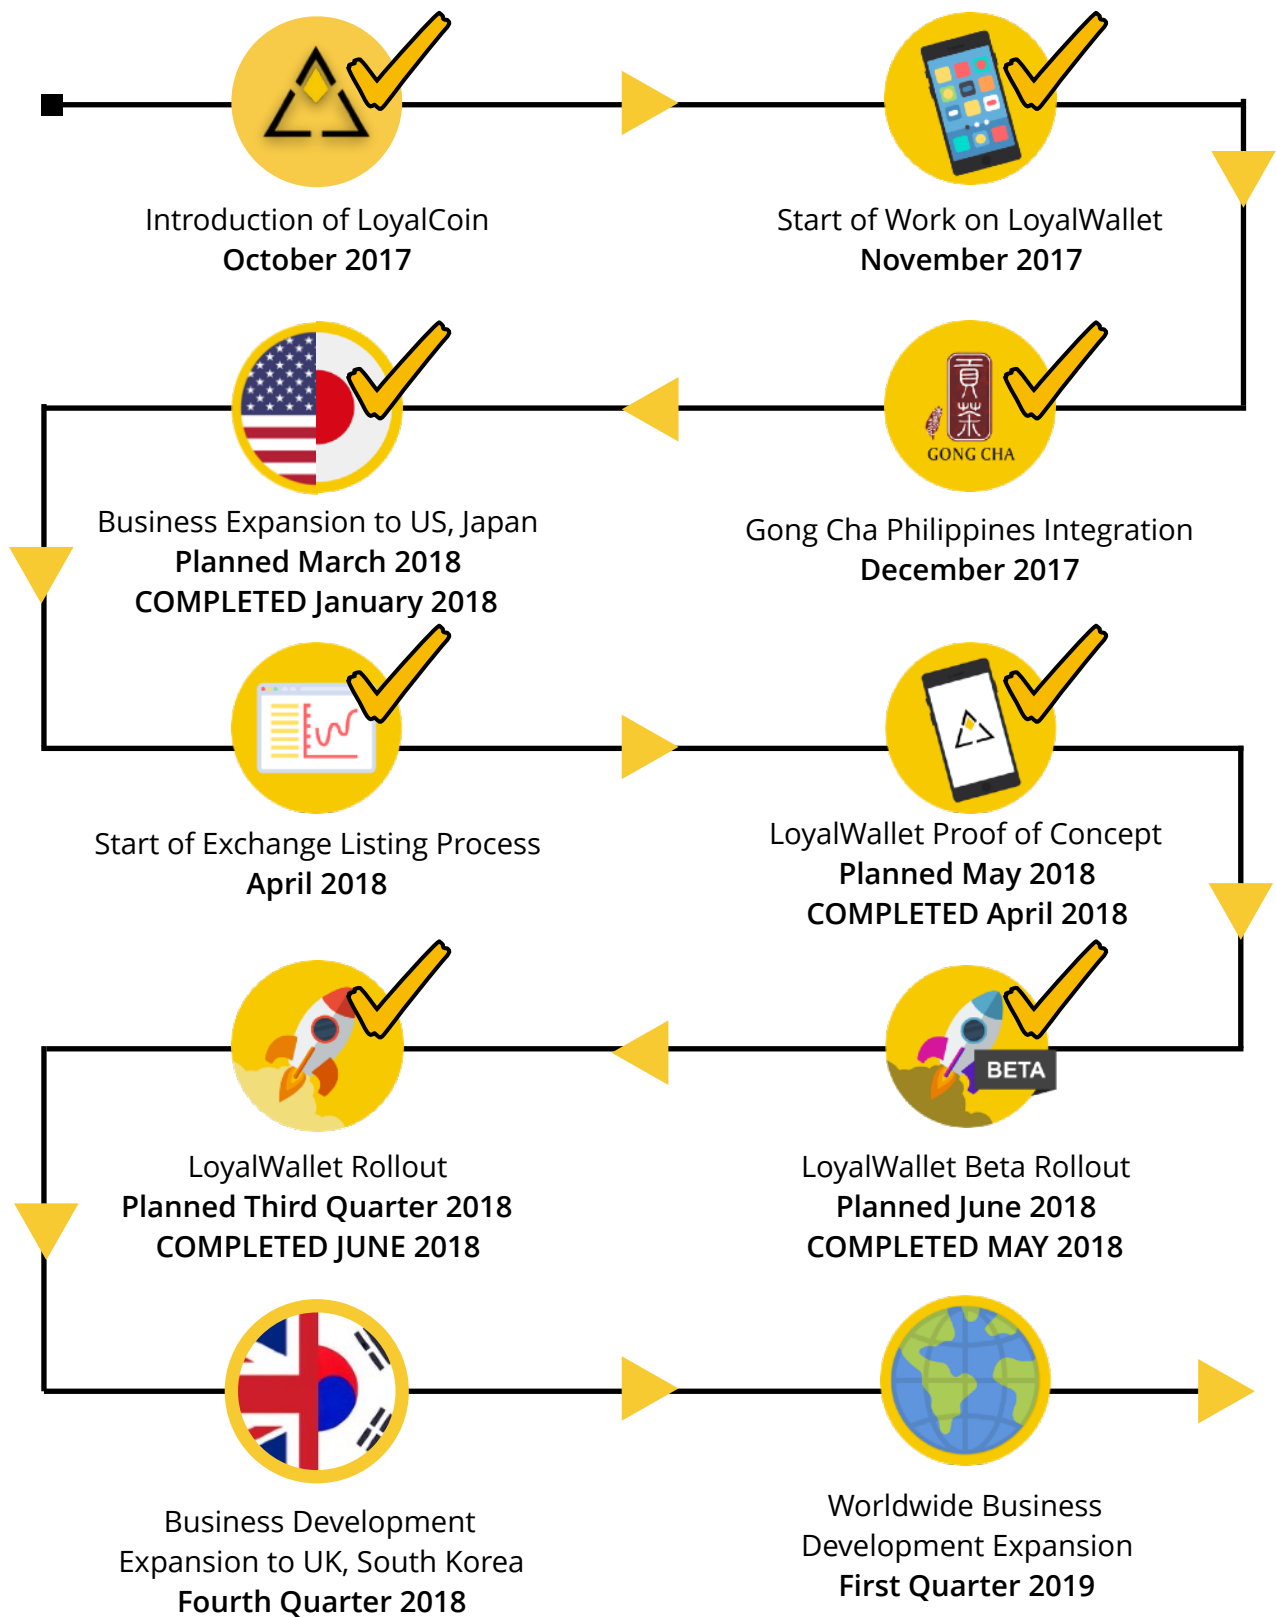

INNOVATIONS AND OTHER ARRANGEMENTS

LoyalCoin's system also allows for innovative use cases for the LoyalCoin token. For instance, in the United Kingdom, our partnership with 50cycles, an electric bike pioneer, will include the earning of LoyalCoins for e-bike riders who record 2,000 miles of mileage using their e-bikes. As we have envisioned, a technology-enabled, blockchain-backed loyalty solution opened up innovative and game-changing customer loyalty mechanics. LoyalCoin also entertains other arrangements with companies interested in leveraging LoyalCoin's solution in their region, like what Clappy, a startup tech company from the Netherlands, is set to do for its home country with the LoyalCoin solution.

ROADMAP

TEAM

THE LEADERS AND ADVISORS BEHIND LYL

LEADERSHIP

The Appsolutely executive team features a healthy mix of savvy, enterprising veterans and fast-rising young executives, forming a cross-generation team of visionaries, developers, marketers, managers, and experts.

Patrick Paul Palacios, Founder, President, and Chief Executive Officer.

Patrick founded Appsolutely in 2013, after seeing the huge growth potential for e-commerce in the Southeast Asian region. Prior to establishing Appsolutely, he went on a stellar two-decade run as a tech entrepreneur and executive, creating digital business ventures Ilios Resources and Helius Tech and setting strategies for tech and telco conglomerates such as Digitel, Nortel, and Lucent. He sees Appsolutely as a solution to companies' challenge of building deeper, richer ties with their customers, regardless of the technology in any

region. LoyalCoin is his brainchild, and he determines its overall concept, direction, execution, and aspirations.

Paolo Bediones, Chief Operations Officer.

Paolo joined LoyalCoin in 2017, first as head of marketing and communications and now as COO. He is widely known as a broadcast veteran with programs for the biggest television stations in the Philippines. But beyond TV, he is also an entrepreneur in the restaurant industry, a Masters in Entrepreneurship candidate at the Asian Institute of Management, a professional speaker, a blockchain advocate, and more. In his role as COO, he ensures that LoyalCoin's vision and messaging, including the creation of the LoyalWallet and LoyalCoalition, are brought into fruition.

Ahmad Alkabra, Chief Technology Officer.

Ahmad joined LoyalCoin after a successful run at innovative US telco T-Mobile, where he led product development for the T-Mobile Tuesdays customer loyalty app and advocated for blockchain technology to top management. Before rising to the ranks at T-Mobile since he joined in 2008, he was a well-respected product and program consultant for Microsoft, drugstore.com and AT&T Mobility. He also has a Stellar academic background, with a Bachelor of Science in Electrical Engineering from the University of Kentucky, a Masters degree in Software Engineering from Seattle University, and an MBA from the University of Washington. His expertise and leadership in the intersection of technology and business makes him a strong leader for Appolutely's technology endeavors.

Jaromy Pittario, Global Sales Head.

Prior to joining LoyalCoin, Jaromy honed his sales expertise at the intersection of e-commerce, digital and mobile platforms, and customer loyalty. He served as senior director for sales at Gilt Groupe, where he led sales efforts for the loyalty program of the online shopping and lifestyle website. He also led sales and partnerships at native commerce company StackCommerce, handling 500+ publisher stores and 750+ partner sites, and served as vice president of sales at exclusive restaurant reservations app Velocity App.

Francis Patron, Regional Sales Head.

Francis is a veteran leader whose career spans across industries such as technology solutions, hotels, online publications, and cement manufacturing, providing him with an extensive list of contacts that can further the LoyalCoin cause. He has served as General Manager at Big Boss Cement, COO of Global Content & Research Ltd., and President & CEO of Alliance Technologies Corp, as well as several leadership roles in renowned hotel companies in the Philippines.

Richard Funk II, Head of Legal and Anti-Money Laundering Compliance.

Richard's name is synonymous with compliance in the Philippines. He is an independent legal practitioner who led compliance at financial institutions in the Philippines such as Rizal Commercial Banking Corp. and PNB General Insurers Co. Inc. He also spent more than a decade as head of the compliance division of the Anti-Money Laundering Council for the Bangko Sentral ng Pilipinas, the Philippines' central bank. In addition, he is a professional anti-money laundering trainer. At Appsolutely, he ensures that whatever the direction of LoyalCoin is, it will be on the straight and narrow.

Ike Tuazon, Chief Security Officer.

Ike is a veteran corporate leader and entrepreneur with extensive experience in technology and finance, making him an excellent asset to the LoyalCoin team. Most recently, he was vice president, cash center and ATM operations head at Philippine Bank of Communications, arming him with significant security expertise. He was also vice president of business solutions services at Citigroup, as well as a core team member of various startup businesses handling technology-focused products.

Joana Paguio, Human Resources Head

Joana, a ten-year veteran in the human resources industry, joined Appsolutely following a HR directorship position at DalaGuio Consulting. She is also an academic achiever, graduating as summa cum laude for her masteral degrees in two courses — Mathematics and Management — at the University of the Philippines.

Koji Kawato, Country Head, Japan.

Koji is a leader of investors across multiple countries. Following a management stint at Fujitsu Philippines, he headed P&P Investor Group, a promotion company for Filipino and Japanese investors. He joined LoyalCoin to expand its reach in Japan and to create connections across Asian countries as the first country head for Japan.

Hanwool Bae, Business Development Manager, South Korea.

Hanwool started out as a community leader for LoyalCoin enthusiasts in South Korea, with significant business connections and events management experience. After being the central figure in introducing LoyalCoin in the country, he formally joins the LoyalCoin team to expand business ties and LoyalCoin's merchant partnerships in the country.

ADVISORY BOARD

Appsolutely has also assembled a reputable team of advisors for LoyalCoin. These advisors, who bring in international educational and professional credentials to the table, are providing crucial support and guidance that will help propel LoyalCoin to its goal of global adoption and revolution in the customer loyalty space.

Stephen Chia, Regional Head for Southeast Asia of NEM Foundation.

Stephen is renowned in Southeast Asia as a leader for technology-related businesses, most recently at NEM. Before he became NEM's leader for the region, he backed fiber Internet company Cambodian Broadband Technologies Co. Ltd. in 2008 through a seed investment he still maintains. He also served as a director of Malaysian property development company Palam

Mesra for 26 years and mobile technology company ADAcode Systems, also in Malaysia, for almost four years. He also led Malaysian wireless broadband Internet service provider BizSurf from 2002 through 2008.

Nelson Valero, Council Member of NEM Foundation

Nelson played a vital role in setting up an effective community management, social media, and other public-facing endeavors of the NEM Foundation. His decade-long expertise as systems administrator for the Catholic Commission for Employment Relations equipped him with the necessary skills to take NEM's message worldwide. He is advising LoyalCoin to ensure that the right message gets delivered across multiple digital platforms.

Mike Onghai, Chief Executive Officer of Snowy August Management and LookSmart.

Mike was the third member of the GeoCities team, which Yahoo bought in 1999. Since then, the UCLA alumnus became a hedge fund manager for a family office in New York, took over Nasdaq-listed company LookSmart in 2013, and ran two software companies. He is also on the board of three public companies, including MGTI, John McAfee's cybersecurity and cybercurrency mining company, LookSmart Group, which is launching a blockchain fund, and

Tongxin, a China based auto accessories company. He is a source of insights regarding international markets such as the US and what it takes to make it big globally.

Andrew Ong, Owner and General Manager of Gong Cha Philippines.

Andrew brought Gong Cha, a global franchise of Taiwanese milk tea shops, to the Philippines in 2011, and has since ran the business and spearheaded the popularity of milk tea in the country. Gong Cha Philippines has been an early adopter and believer of Appsolutely's loyalty technology, including LoyalCoin.

This Boston University graduate has since brought in another international franchise, Los Angeles-based Pizza Studio, to the Philippines.

Alan Soucy, Chief Executive Officer of Sparkpr.

Alan has led Silicon Valley-oriented Sparkpr, which was named Public Relations Agency of the Year by industry publication PR World, since 2006. His 25-year experience in managing and directing technology services and products for companies such as Philips Mobile Computing Group, MTI MicroFuel Cells, and Tripath Technology has informed the tech-centric approach of Sparkpr, which counts dozens of Fortune 500 companies and successful

blockchain companies as some of its clients. This University of Rhode Island alumnus provides marketing and public relations advice for LoyalCoin.

Solomon Castro, Managing Director and Senior Advisor of CFP Transaction Advisors.

Solomon is an internationally trained lawyer with more than 15 years of professional experience in corporate finance, infrastructure, & development consulting. The Cornell University Master of Laws graduate is currently a project advisor to the developer of the Philippines' largest Greenfield self-generation project. His expertise ensures LoyalCoin's legal footing internationally.

Hector Florento, Finance Director and Senior Advisor of CFP Transaction Advisors.

Hector is a finance specialist who has advised Philippine government agencies and various USAID and other donor-funded projects over the past decade. The University of Cambridge alumnus has been an investment banking professional who assisted various companies in raising long-term capital through public offerings or private placements. He provides financial and fiduciary advice for LoyalCoin.

Jay Fajardo, CEO of Launchgarage and Proudcloud

Jay is a serial tech entrepreneur, advocate, and leader. He is currently founder and CEO of Ruby development shop ProudCloud, co-founder and chief technology officer of HealthTech startup MEDIFI, and founder of LaunchGarage, an innovation hub based in Manila. A long-time believer in Appolutely's capabilities and potential, he will provide technical advice for the next step in this customer loyalty innovator's journey.

Jojo Flores, Co-Founder and Vice President of Operations of Plug and Play Technology Center.

Jojo is a leader in the tech innovation space, serving as a co-founder of Silicon Valley-based venture fund, innovation platform, startup accelerator, and corporate innovation consultancy Plug and Play. Bridging the growing Asian startup scene and Silicon Valley's established technology credentials, He will work hand in hand with Appolutely to bring LoyalCoin across the Pacific.

Yobie Benjamin, Founder of Token Inc. and Chief Technology Officer of ClickSWITCH

Yobie founded TokenOS, an operating system for open banking that features smart tokenization. He also leads technology development for cloud-based financial software company ClickSWITCH and co-founded virtual reality software company Avegant. In addition, he was invited as a technology pioneer for the World Economic Forum in 2015.

Ryan Scott, CEO of ICO Advisory Group and Causecast

Ryan is creator and leader of ICO Advisory Group, a reputable advisory firm for blockchain-based digital assets, and Causecast, a cause engagement software-as-a-service company. He also serves as an advisor at BlockRx, Karma International LLC, and Lottery.com. He is providing LoyalCoin an adequate runway in terms of launching in North America.

Emerson Fonseca, Head of NEM Philippines

Emerson advocates the spread of blockchain in the Philippines through his leadership role for NEM in the country. Drawing from his expertise gained at previous managerial roles at Hewlett Packard and Philips Electronics, he has since guided LoyalCoin's bounty, community, marketing strategies, and communications for investment opportunities.

Scott Robinson, Founder and Vice President of Plug and Play FinTech

Scott is a financial technology visionary who formed Plug and Play FinTech, a startup accelerator program for fintech. He is also an early backer and vocal advocate of blockchain, founding Plug and Play Bitcoin in November 2013. He helps optimize and expedite LoyalCoin's growth while connecting it the top-tier businesses.
